Paradiso

Teengagement gets Paradiso LMS to pair up with Clever SIS to streamline training in district schools

A well known training institute in the K12 education sector, Teengagement, is revolutionizing the way classroom relationships should be fostered between the teens and their teachers. The problem they faced was that they had no single control panel to impart training to the different schools where they had their curriculum running. They were on the look out for a secure platform that would keep their student data secure, given the huge volume of student data they generated.

Teengagement partnered with Paradiso to get Paradiso LMS integrated with Clever SIS. This integration was implemented with the multi-tenant module where Teengagement would have all the tenants' (schools in this case) data stored in a single database. Besides, with the multi-tenant feature of PLMS Clever integration, when the LMS admin from a particular district would access the LMS, he'd only be view/edit their own data; records for other tenants (schools) in the LMS would be filtered out.

WHAT TEENGAGEMENT WANTED?

> Teengagement wanted to control imparting of training to various district schools from a single platform.
> They wanted their users to view training information based on their role in the school. Eg - Teachers, students and school admins.
> They wanted all the schools in Clever SIS as tenants in Paradiso LMS.
> They wanted to create a 3 level class structure in PLMS based on structure in Clever i.e. School / Teacher name / Class name
> All the users from Clever needed to reflect in Paradiso LMS.
> SSO into PLMS from Clever for all the users.

WHAT WE DID?

Paradiso LMS - Clever Integration

▮ Application development for PLMS in Clever following Clever API documentation
▮ SSO (Single Sign On) into PLMS from Clever
▮ User Creation - Users from Clever were created in PLMS, based on the information pulled from Clever.
▮ School Sync - Schools in Clever became Tenants in PLMS
▮ Department Sync (classes) - 3 level class structure was created in PLMS based on the following: School / Teacher name / Class name as it is on Clever school.

IMPACT & RESULTS

Paradiso LMS made it easy for the admin, teachers and students to move between platforms via the Single Sign On feature. This alleviated the need to memorize different passwords for each product and ultimately lesser headaches, for both the user and the admin, associated with forgetting and resetting passwords. This enhanced the end-user experience by making the process quick and simple.

The multitenant feature of Paradiso LMS smoothed out many of their concerns. All the schools they had in Clever went as tenants and had access to their just their own data. With multi-tenant structure, Teengagement experienced quicker initial start-up whenever they wanted to add a new school as a tenant. The best part for them was the ability to control the progress of multiple schools from one control panel - 'the all seeing eye approach'.

All the users from Clever got created in Paradiso LMS, the Schools became tenants and the departments got synced. PLMS provided 24*7 technical support, secure hosting on company's cloud and robust data retention backup plan for contingencies. Paradiso LMS did the all the heavy lifting for Teengagement which spared time for them to concentrate on what they did best... engaging teens in academics.

SCOPE FOR DEVELOPMENT

Adding real-time user synchronization, wherein if a user is generated in Clever, it'll automatically get created in Paradiso LMS.
